

Login Testing – QA Reference Guide

Practical test scenarios for validating web application login functionality.

1. Login Testing Objectives

- Verify valid users can log in.
- Verify invalid credentials are rejected.
- Verify required fields and input validation.
- Verify session and logout behavior.
- Verify authentication and authorization controls.

2. Positive Test Scenarios

- Login with valid username and password.
- Verify successful navigation to the dashboard.
- Verify authenticated user information.
- Verify logout ends the authenticated session.

3. Negative Test Scenarios

- Incorrect password with valid username.
- Invalid username with valid password.
- Both fields empty.
- Only username provided.
- Only password provided.
- Verify errors do not expose sensitive information.

4. Boundary and Validation Testing

- Test minimum and maximum username length.
- Test minimum and maximum password length.
- Test leading and trailing spaces where applicable.
- Test special characters according to requirements.
- Test input exceeding documented limits.

5. Security Testing

- Verify passwords are masked.
- Verify protected pages require authentication.
- Verify logout prevents continued access.
- Verify authentication errors do not expose account information.
- Verify repeated failed attempts follow security requirements.

6. Sample Test Case

- ID: LOGIN-TC-001
- Title: Successful login with valid credentials.
- Precondition: A valid test account exists.
- Steps: Open login page, enter valid username, enter valid password, select Login.
- Expected Result: User is authenticated and redirected to the expected authenticated page.
- Status: Not Executed.
